2. Purpose of this document

The purpose of this document is to provide instruction on the creation, configuration and management of Validation Rules.

3. Introduction

3.1. What are the Validation Rules?

Comply comes preconfigured with Rules which help automate the validation of returns data. These include:

- Standard Rules:
 - There are 290 + built in rules.
 - These include VAT, VIES and Intrastat rules.
 - These are split between Mandatory and Configurable rules.
- Custom Rules
 - Depending on the contract type, clients can avail of a number of customisable rules.
 - Custom rules can be configured by Admin Users.
 - These can be configured/enabled at Return Type, Jurisdiction and/or Entity level.

Please note: Only Admin users of Comply can view/configure rules

3.2. Errors and Warnings

Validation rules are designed to provide validation and once triggered may display an Error or a Warning.

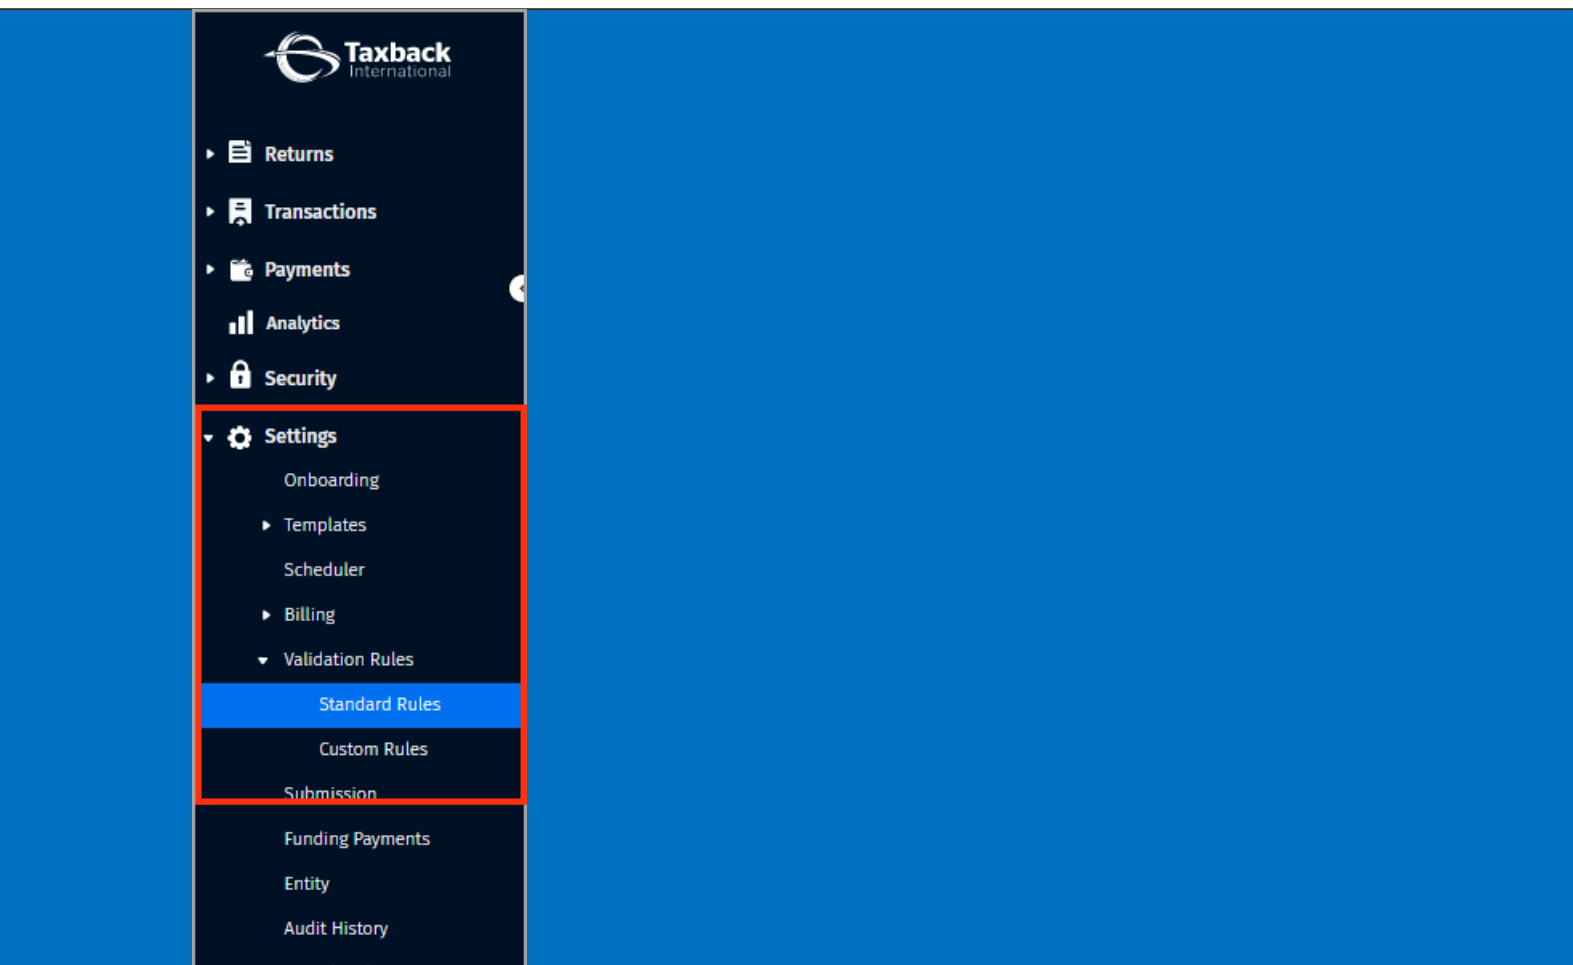

Type	Description
Error	An error occurs where there is a problem with mandatory values or data which must be rectified before the VAT Return can continue to be processed. i.e. This could be an incorrect/missing VAT Rate for the jurisdiction, which stops the required calculations across numerical boxes.
Warning	If triggered, a warning is used to bring attention to data which is outside the validation criteria but which is not mandatory and does not stop the return being processed or filed. <i>i.e. This could be a value which is outside a configured threshold or average. The variance from previous periods could be high or low and the warning is in place to review for potential flags.</i>

4. Standard Rules

As outlined above, Standard Rules include a suite of preconfigured validation rules. These rules are run against the uploaded data file to ensure all the data for the return is in good order.

Navigation:

Settings > Validation Rules > Standard Rules

The Standard Rules screen is comprised of a table of rules displayed across 4 columns. The majority of these rules are mandatory and are by default locked for editing.

1. **Rule ID** – This column lists designated ID's related to VAT rules.
2. **Validation** – This column provides a description of the rule.
3. **Error Type** – There are 2 Error Types: Error or Warning.
4. **Active** – Most Standard Rules are mandatory and will be configured during the Onboarding Process. Some rules will have an option to be **Enabled** or **Disabled**.

However some rules can be further configured/managed.

5. If the **Gear** icon is visible, Validation Rules may be edited by Admin user.

Rule ID	Validation	Error Type	Active
1.01	Valid Data Inversion	Error	Mandatory
1.01	Null Data Input Gross Amount	Error	Disabled
B1.01	Format Check Input Gross Amount	Error	Disabled
C1.01	Valid Input Gross Amount	Error	Disabled
B1.02	Format Check Input Gross Amount Tax Jurisdiction Currency	Error	Disabled
A1.03	Null Data Input Invoice Date	Error	Disabled
B1.03	Format Check Input Invoice Date	Error	Enabled
C1.02	Valid Input Invoice Date	Warning	Disabled
A1.04	Null Data Input Invoice No	Warning	Mandatory
A1.05	Null Data Input Invoice Post Date	Warning	Mandatory
B1.05	Format Check Input Invoice Post Date	Error	Mandatory

4.1. Configurable Rules

Where a **rule** is configurable, the user is presented with multiple options:

- Change the **Error Type** from a Warning to and Error or vice versa.
- **Enable/Disable** the Rule.
- Configure the rule to apply to certain attributes only i.e. Return Types/Jurisdictions/Entities.

4.1.1. Change the Error Type

To change the error type, select either **Error** or **Warning** from the drop-down menu.

4.1.2. Enable/Disable the Rule

Turn the Toggle switch on/off as required.

4.1.3. Set rule behaviour

Click on the **Cog icon** to configure the rule to apply to certain attributes.

Example: For this exercise, we want to rule to apply to **VAT Returns** only in the **UK** for the **Entity PL 1**

1. Click the **Cog**.

Rule ID	Validation	Error Type	Active
Filter by	Filter by	Filter by	Filter by
G1.01	Valid Data Inversion	Error	Mandatory ☐ Since 2020-11-25
A1.01	Null Data Input Gross Amount	Error	Disabled ☒ Since 2022-10-26  Updated At 11-10-2022
B1.01	Format Check Input Gross Amount	Error	Disabled ☐ Since 2022-10-26 

2. Select **Vat Returns** from the Return Type drop-down and click **Apply** (multiple options can be selected).
3. Select **UK** from the Tax Jurisdiction drop-down menu and click **Apply** (again multiple options can be selected if required) .
4. Select **Entity PL1** from the Entity drop-down menu and click **Apply** (again multiple options can be selected if required) .

Rule Application Settings

Return Type	Tax Jurisdiction	Entity
Select	Select	Select
2 Select ☐ Select All ☒ VAT Return ☐ VIES Return ☐ Annual VAT Return ☐ Control List Clear Apply	3 Select ☐ Ukraine ☐ United Arab Emirates ☒ United Kingdom ☐ United States of America Clear Apply	4 Select ☐ Select All ☒ Entity PL 1 ☐ UK Entity 1 ☐ Entity DE01 ☐ Entity FR22 Clear Apply

5

Cancel

SAVE

6

+ Add

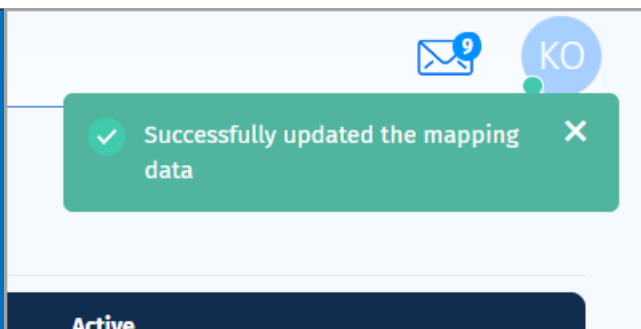

5. Select Save. The rule setting is applied.

Rule Application Settings

Return Type	Tax Jurisdiction	Entity
VAT Return	United Kingdom	Entity PL 1
Select	Select	Select

+ Add

The following message is displayed to confirm that the relevant mapping has been updated to reflect the new rule settings.

6. Select Add to create additional settings if required.

Rule Application Settings

Return Type	Tax Jurisdiction	Entity	
VAT Return	United Kingdom	Entity PL 1	
Select	Select	Select	+ Add

These can also be deleted at any time by clicking the Bin Icon beside the rule setting.

Rule Application Settings

Return Type	Tax Jurisdiction	Entity	
VAT Return	United Kingdom	Entity PL 1	
Select	Select	Select	+ Add

5. Custom Rules

Depending on the clients contract, different plans allow varying allocations of Custom Rules up to a maximum of 20. This allows the client to create specific rules which apply to their own requirements.

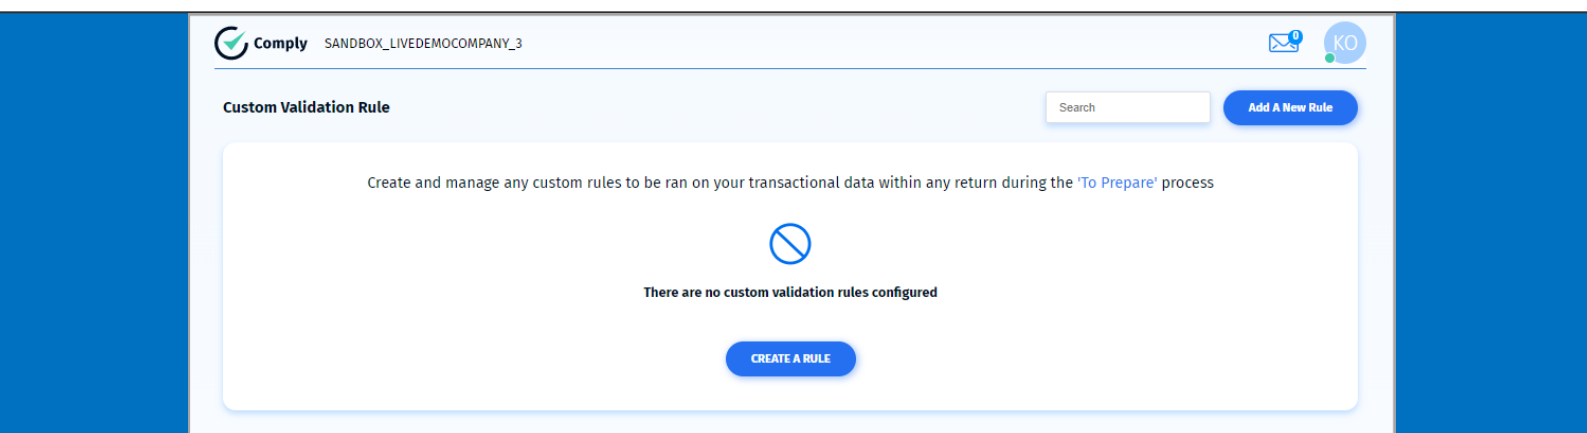

5.1. Creating a Custom Rule

Navigation: Settings > Validation Rules > Custom Rules

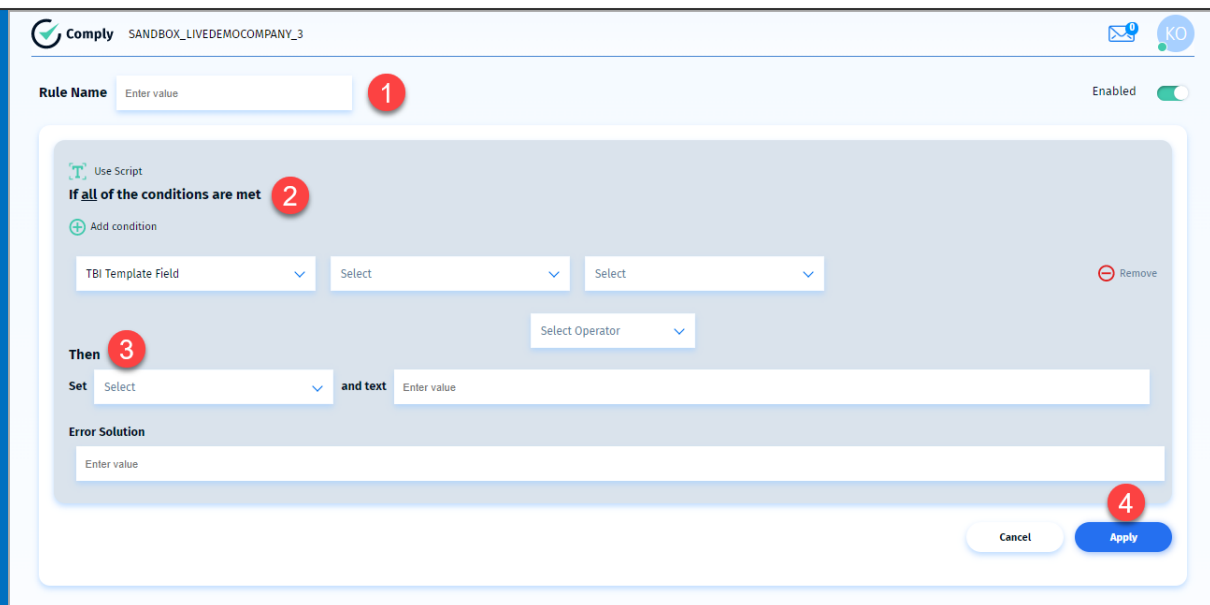

5.1.1. How to Create a Custom Validation Rule

Click 'Add A New Rule' or 'Create a Rule'.

1. Enter a Name for the new Rule.

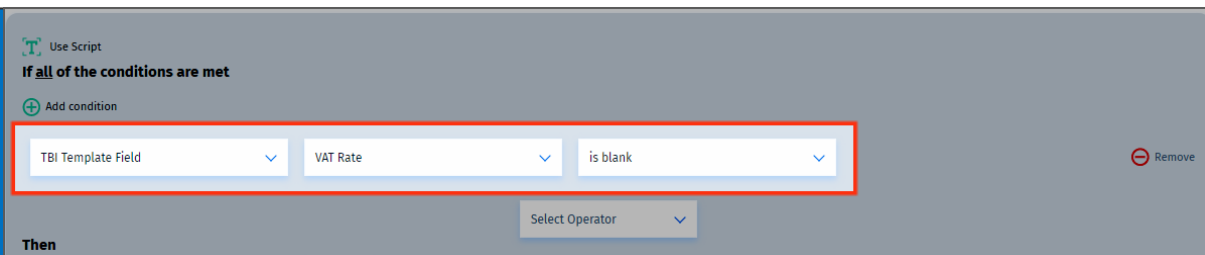

The screenshot shows the 'Comply' interface for configuring a new validation rule. The interface includes a 'Rule Name' field (1), an 'If all of the conditions are met' section (2) with 'Add condition' and dropdowns for 'TBI Template Field', 'Select', and 'Select', and a 'Then' section (3) with 'Set' and 'and text' dropdowns. At the bottom, there is an 'Error Solution' field and 'Cancel' and 'Apply' buttons (4).

All rules consist of an “If” statement and a “Then” statement.

- **If Statements** contain the “what” component of the rule, this tells the system to look out for certain criteria or data.
- **Then Statements** contain the behaviour component, this tells the system what to do when the data in the If Statement has been triggered.

2. Adding Conditions

- a. Select from which template you wish to add the rule (TBI or Client Template Field)
- b. Select the field to be validated.
- c. Select the validation terms (Blank/Less than/Equal to etc).

The screenshot shows the 'Add condition' section of the Comply interface. A red box highlights the dropdowns for 'TBI Template Field', 'VAT Rate', and 'is blank'. The 'Then' section is visible below.

3. (Optional) Select **And/Or** if you wish to add additional If Conditions to be validated.

Use Script

If all of the conditions are met

+ Add condition

TBI Template Field VAT Rate is blank Remove

If any of the conditions are met

+ Add condition

Client Template Field Select Select Remove

Then

Selecting an option here requires a new If Statement to be configured.

4. Add the **Then Statement**: This is the behaviour you wish the system to perform when ALL the IF conditions are met.
 - a. Display Error
 - b. Display Warning

If any of the conditions are met

+ Add condition

Client Template Field Select Select Remove

Then

Set Select and text Enter value

Error Error

Warning Warning

Cancel Apply

5. **Add Text**. This is a free form text field. Add a brief description of the Error or Warning. This will be displayed when an error or warning is triggered.
6. **Add Error Solution**. This is a free form field. Add a suggested solution/guidance for the error or warning. This will be displayed for the user once an error or warning is triggered.

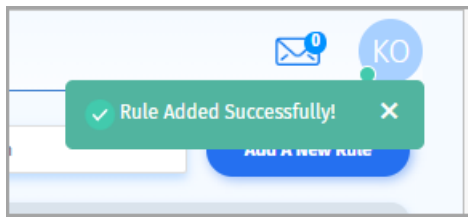

Then

Set Error and text VAT Rate is a Mandatory Field

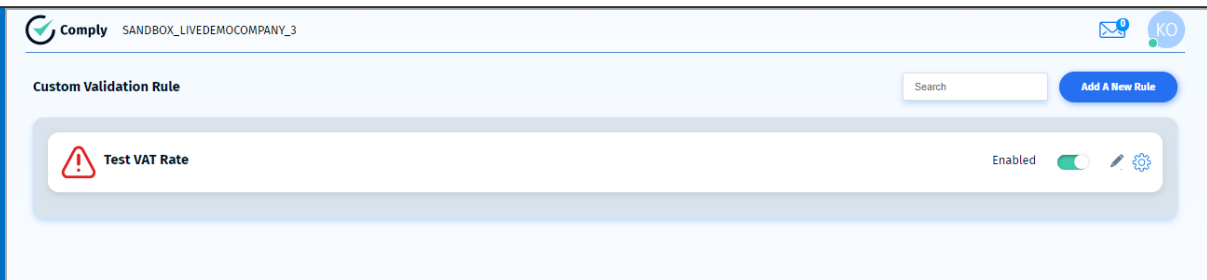

Error Solution

Update data with Valid VAT Rate

- Click **Apply**. A success message is displayed confirming the rule has been added.

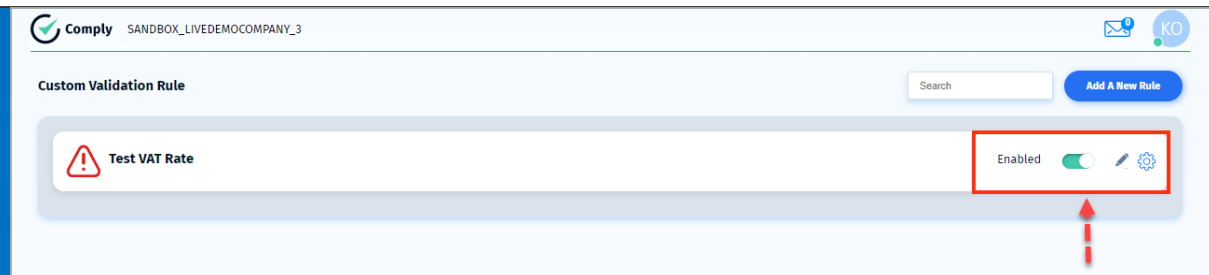

The Rule is now added to the Custom Rules screen.

5.2. How to Edit Custom Rules

Custom Rules can be edited at any time by selecting any of the Edit functions on each rule.

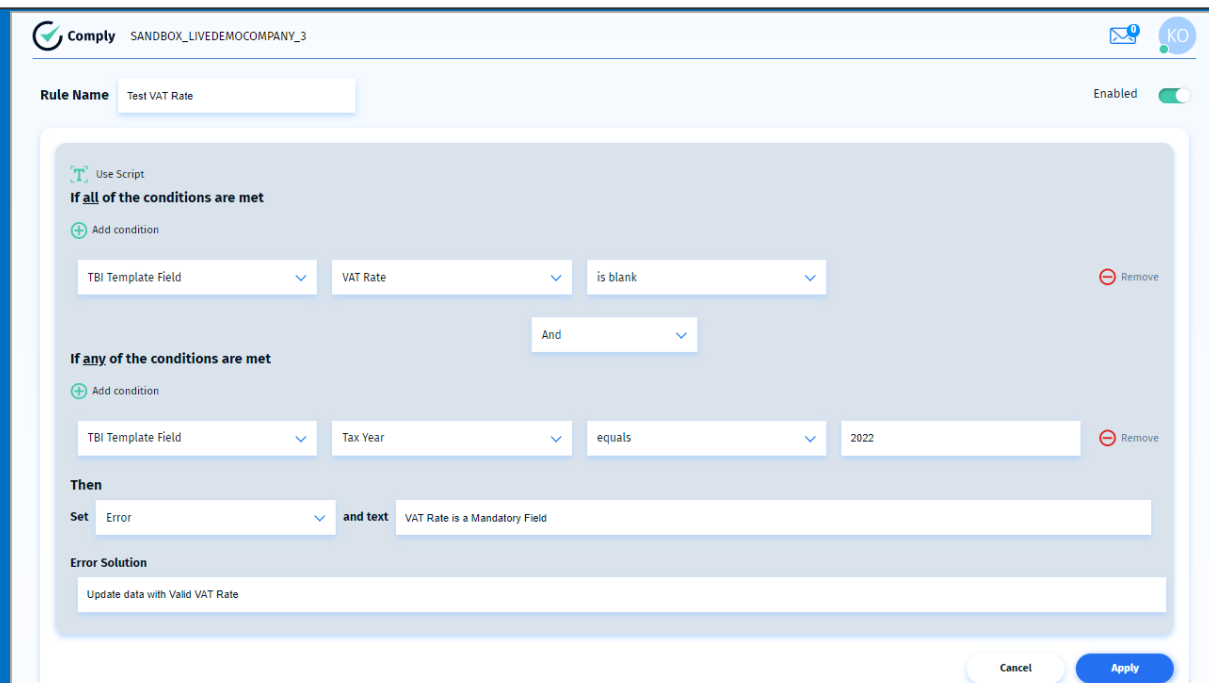

5.2.1. Enable/Disable a Custom Rule

Custom rules can be Enabled/disabled as required using the Toggle Switch.

5.2.2. Edit the Rule Conditions

To edit/update the conditions (if and/or Then Statements), click the Pencil Icon and simply update the relevant fields as required

Note: Make sure you select **Apply** to save the changes.

5.3. Set the Attributes the Rule Applies to.

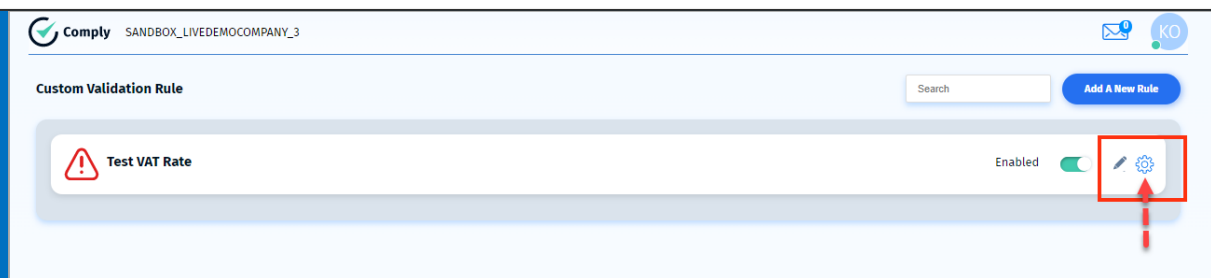

In addition, and similar to Standard Rules, the Admin user can configure Application Settings for their Custom Rules. This means the Custom Rules can be configured to be applied only to a specific Return Type(S), Tax Jurisdiction(s), and/or Entity(s).

*Navigation – Settings – Validation Rules – Custom Rules - Select the **Gear icon**.*

Example: For this exercise, we want the rule to apply to **VAT Returns** only in **Albania** for the **Entity PL 1**

1. Click the **Cog**.

2. Select **Vat Returns** from the Return Type drop-down and click **Apply** (multiple options can be selected).
3. Select **UK** from the Tax Jurisdiction drop-down menu and click **Apply** (again multiple options can be selected if required) .
4. Select **Entity PL1** from the Entity drop-down menu and click **Apply** (again multiple options can be selected if required) .

Rule Application Settings

Return Type	Tax Jurisdiction	Entity
VAT Return	United Kingdom	Entity PL 1
		☐ Select All ☒ Entity PL 1 ☐ UK Entity 1 ☐ Entity DE01 ☐ Entitiv FR22 Clear Apply

+ Add

5. Click **Save**.
