2. Templates – Txt File Delimiters

What are delimiters?

A delimiter is a sequence of one or more characters for specifying the boundary between separate, independent regions in plain text, mathematical expressions, or other data streams. An example of a delimiter is the comma character, which acts as a field delimiter in a sequence of comma-separated values.

3.1. Duplicated Upload Return File

When preparing a return and the user uploads an additional Data File for Upload which has the same file name as an existing file/linked return, then the user will be presented with the following Pop-up message.
